

NOVA/TETENAL RA4 10 Ltr

ANT256310 - Kit including Dev, Starter & Blix

MIXING INSTRUCTIONS

The Developer / Replenisher consists of 3 parts (1,2,3)

DEVELOPER MIXING

When using the developer for the first time, a 'tank solution' must be created which includes the 'starter' chemical.

Follow steps below:-(to mix 1 Litre)

1) Firstly mix a 'REPLENISHER' solution:-

875ml (water) + 50ml (Part 1) + 25ml (Part 2) + 50ml (Part 3)

2) Then mix your 'STARTING TANK SOLUTION':-

700ml(of replenisher made above) + 25ml(starter) + 275ml(water)

Once you have filled your processor with 'tank solution' you must only use 'replenisher' for replenishment.

If you fill up again with fresh chemistry, you must again begin with a 'starting tank solution' as above.

The Bleachfix / Replenisher consists of 2 parts (1,2)

BLEACHFIX MIXING

The bleachfix is mixed in only one way and is used as 'starting tank solution' and 'replenisher'.

To mix 1 Litre:-

700ml(Water) + 200ml(Part 1) + 100ml(Part 2)

TEMPERATURE = 35°C

**TIME = 45 SECONDS FOR BOTH DEVELOPMENT
AND BLEACH/FIX**
