

THE NOVA *HOCUS FOCUS*

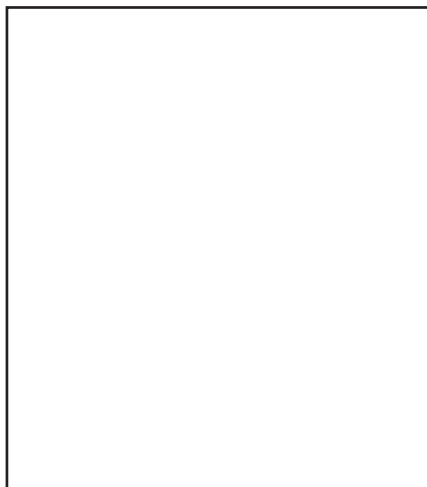

ENLARGER FOCUSING AID

CREATED BY BOB MITCHELL

Features:-

- * Focus anywhere on the image
- * Up to 3 stops brighter than other focusing aids
- * Lightweight & compact
- * Accurate

Directions:-

Place the bottom in the portion of the projected negative you want to focus.

Tilt the Hocus Focus until you see a bright projection on the focusing screen.

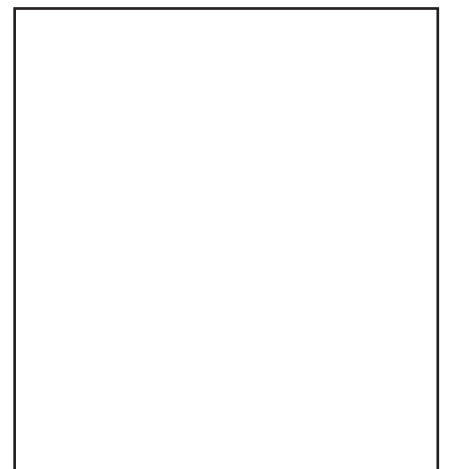

Focus the enlarger!

The reflected image on the focusing screen at the top of the Hocus Focus is approximately three f - stops brighter than the reflection off the easel, making it very easy to focus!

The intelligently designed 5" (10cm) tall Hocus Focus is an example of the phrase 'form follows function'.

The one piece construction of clear polycarbonate assures that you will never need to align or adjust the focuser. The Hocus Focus gives you quick, repeatable and dependable focusing with minimal effort.

Clean the Hocus Focus with a soft, damp cloth. Avoid finger prints on the mirror and focusing screen.
